

Beyond the High Flux Key concept and benefit of new dialyzer

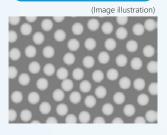

Our POLYNEPHRONTM membrane has high water permeability and a property to remove uremic toxin. It has an excellent design concept, not only small molecule uremic substances but also low molecular weight protein such as β 2-Microglobulin. Although it has high removal efficiency, it also incorporates a design that suppresses leakage of essential proteins such as albumin, which should suppress leakage, and has excellent removal characteristics.

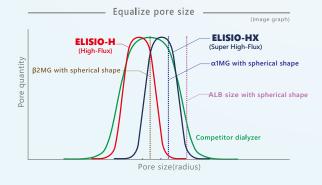

The case of equalized pore

With considering the selection ability between uremic toxin and non-uremic toxin, homogenize technology of pore size are required.

Current membranes has non-uniformed pore structure. Our POLYNEPHRONTM has highly homogenized and controlled pore and these will helps the therapy to be moreefficient

● 適應症 •••

治療罹患慢性腎臟病(CKD)且接受透析之成人病人的次發性副甲狀腺機能亢進。

冊 用法用量●●●

建議劑量 通常口服起始劑量為 1 mg evocalcet 每天一次。若病人的PTH值偏高(以 iPTH 值 \geq 500 pg/mL作為指標),且血鈣值 \geq 9.0 mg/dL,醫師應考慮 每天一次 2 mg evocalcet 的起始劑量。之後,應小心監測病人的副甲狀腺素(PTH)和血鈣值。若病人對治療的反應不佳,可適度調整劑量,最多可增加至 12 mg 每天一次。

● 作用機轉 •••

Evocalcet 是一種擬鈣劑,作用在副甲狀腺細胞表面的鈣感受性受體。 Evocalcet 經由增加鈣感受性受體對於細胞外鈣的敏感性,抑制 PTH 分泌,進而降低血中 PTH 濃度。

PTH 的降低伴隨著血清中鈣值的共同降低。
